VI. PRESENTATION OF DISCONTINUED 1961 CLASSES IN 1962 QUARTERLY REPORTS

Almost all of the 1961 classes which were discontinued in 1962 have been re-numbered for presentation in this report. The re-numbering was designed to transfer the discontinued classes to the same part of the commodity classification as includes their content in 1962, and thereby to facilitate comparisons of trade in the two years. Whenever the content of one or more discontinued classes closely approximated the content of a new 1962 class (or of a 1962 class whose content had been altered), they were re-numbered with the appropriate 1962 class code. In cases where individual class comparisons could not be made it was often possible to group together a number of discontinued 1961 classes under the "n.o.p." code of a new sub-group or under an artificial or "dummy" code located in the proper sub-group.

All but eleven of the discontinued 1961 classes were re-numbered. Nine of these classes, 1611, 3941, 3993, 4067, 4293, 4296, 5144, 8181 and 9160, were already located in the same sub-group as their successor classes, and for these there is no difficulty in making comparisons. The other two classes, 8173 and 8189, contained goods which are now distributed over several classes located in different sub-groups, and it was not possible to improve 1961-62 comparability by re-numbering.

The re-numbering of discontinued 1961 classes often resulted in their transfer from one main group to another. As a result the main group totals for 1961 trade with the United Kingdom and the United States which appear in Table 2 of this report do not match the totals originally compiled on the basis of the 1961 classification and still published in 1962 issues of other Trade of Canada reports. It will not be possible to adjust these totals in other reports until Volume III of the annual trade report for 1961-62 is tabulated.

The following table shows the class number under which figures for discontinued 1961 classes are presented in the 1961 columns of this report (1962 Class), the 1961 class numbers included in each case (1961 Classes Included) and an alphabetic code and footnote reference if necessary on the quality of the resulting comparison (Notes). In the alphabetic code "a" indicates full comparability with 1962 statistics, "b" near comparability (usually about 90% the same as 1962 statistics), "c" poor comparability as indicated in footnotes, and "d" an artificial or "dummy" class for which 1962 figures are not compiled.

- 6 - Figures shown for class 2003 for the period January-June 1961 include only baby chicks (now part of class 2001) and turkey poults (now part of class 2002). The balance of imports of live poultry in this period was included in classes 2254, 2259, and 2260, which also covered dead poultry (these classes are presented under their original codes). From July, 1961, the coverage of 1961 and 1962 classes is the same.
- 7 - Note that in 1961 reports class number 2013 related to "Baby chicks and turkey poults" (discontinued from July 1, 1961); in 1962 reports class number 2013 relates to "Cattle n.o.p.".
- 8 - 1961 value for class 2046 is almost equivalent to the sum of 1962 classes 2031, 2039 and 2046
- 9 - 1961 value for class 3340 is almost equivalent to the sum of 1962 classes 3311-3339. The summary description means "Broad woven fabrics of wool or hair and of mixtures containing wool or hair".
- 10 - 1961 value for class 3789 is equivalent to the sum of 1962 classes 3782 and 3789.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January - March 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

ELIMINATION OF COMMODITY DETAIL ON IMPORTS VALUED FROM \$50 TO \$99

In April, 1962, it became necessary to increase the speed at which statistical clerks could process the customs entries and invoices from which import statistics are derived. Studies made in 1957 and 1958 indicated that some 20% of the statistical components which required separate coding and tabulation involved values of between \$50 and \$99, and that these accounted in total for only about 1% of the value of imports. It was therefore decided to suspend the coding by commodity of values in this range; they are still included in country totals and grand totals, but this requires less than half the work formerly necessary to process these components.

Although components valued between \$50 and \$99 account for only about 1% of the total value of Canadian imports, their importance is much greater in the case of particular commodities. It is estimated that of the 2,246 classes included in groups 1 to 9 of the commodity classification, there are at least 157 commodity classes with annual imports of \$100,000 or more to which components valued between \$50 and \$99 contributed at least 5% of total value, and to 34 of these classes components in this range contributed at least 10% of class totals (see Tables 2 and 3 of this insert). A considerable number of commodity classes with annual totals of less than \$100,000 also obtained a significant proportion of their value from components valued between \$50 and \$99; in general small value shipments tend to be more important in small classes than in large classes.

Effective with statistics for April, 1962, all imports cleared through Customs on entries whose total value is less than \$100.00 are included in class 9275, rather than being classified by commodity. In addition, whenever a single customs entry covers a number of different commodities, those components individually valued at less than \$100.00 are also included in class 9275 unless one of two conditions is met:

- (1) Two or more minor components of a single entry belong in the same sub-group of the classification and together total \$100.00 or more; in this case the total of the minor components is included in the n.o.p. class of the sub-group. This rule was intended to minimize the damage to sub-group totals for such imports as fresh fruits, fresh vegetables, florist and nursery stock, clothing, etc.
- (2) The minor components of a single entry amount in total to less than 10% of the value of the largest component; in this case they are included with the largest component. This rule was intended to simplify the coding of such imports as machines imported with spare parts or ancillary materials, etc.

Statistics for April, 1962, and preliminary data for May and June, indicate that class 9275 included about 1.5% of total imports in these months, whereas in the absence of the two abovementioned qualifications to the \$100.00 rule this class could have been expected to include almost 2% of the total. Components valued at less than \$50.00 (the former content of class 9275) have normally accounted for almost 1% of imports in recent years.

Effective with statistics for July, 1962, the qualifications to the \$100.00 rule were altered in an attempt to restore to the proper commodity class, rather than merely to the proper sub-group, most of the minor components of customs entries which cover a number of different commodities. From July, all components valued at \$50.00 or more on entries with a total value of \$100.00 or more will be coded by class. It is not yet possible to assess the effects of this change. No further steps towards restoring the former \$50.00 coding limit are likely to be possible in the near future.

One additional change made effective with statistics for April, 1962, is in the treatment of packing material. Whenever import packing was separately valued on customs entries it was formerly included in class 9030. Such packing is now treated as part of the value of the goods contained in it, unless the packing is re-usable. This change was introduced earlier in export statistics, and has been found to facilitate the processing of customs entries. It will reduce the total value of class 9030 to less than one-third its former level, but is expected to have little effect on totals for any other individual class.

(ii)

The following tables summarize the results of analyses of import components valued between \$50 and \$99 for the months of May 1957, August 1957, November 1957, February 1958, November 1961, and March 1962, supplemented by a few additional observations for various months of 1961 and 1962 in the case of commodity classes established since 1958.

Table 1 shows the value of \$50-\$99 components by main groups and in total for each of the months studied, and the proportion that these contributed to published totals for the main groups and for total imports. On the average, slightly more than half the indicated proportions will be transferred from groups 1-8 to group 9 in statistics for April, 1962, and subsequent months.

Table 2 shows the number of classes with annual totals of \$100,000 or more in any of the years 1959, 1960 or 1961 (plus a few new classes established in January, 1962) to which components valued from \$50-\$99 contributed 5% or more of the total value of the class in the months studied. There may be a few additional classes established since February, 1958, in which the importance of \$50-\$99 components is 5% or more; it has not yet been possible to check these classes as thoroughly as may be desirable.

Table 3 lists individually the classes summarized in Table 2, and shows for each the weighted average importance of \$50-\$99 components indicated by available studies, together with the range of variation and qualifying notes. Except for such n.o.p. classes as 20, 128, 1720, 1836, etc., these classes will probably be understated in statistics for April, May and June, 1962, by about the proportion shown; the n.o.p. classes will probably be overstated as a result of the rules set forth in paragraph 3 above. From July, 1962, the margins by which most individual classes are understated should be somewhat reduced, but both specific and n.o.p. classes will be similarly affected.

NOTE: Values in this table are totals of the \$50-\$99 components in each main group and in the nine main groups taken together. Percentages show the proportions of each main group and of the nine main groups taken together which were derived from \$50-\$99 components.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.

5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, issue of this report).

6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.
